

Bianca Isidro

biancaisidro.dev | linkedin.com/in/biancaisidro/

Engineering leader specializing in scaling product teams, shaping technical strategy, and building high-trust, inclusive cultures. Known for aligning engineering execution to business priorities and growing organizational systems that empower people and performance.

Experience

SaaS B2B Company – Remote

March 2022 – May 2025

Engineering Manager

- Oversaw two cross-functional product teams, one focused on implementing granular permissions to expand user control across the platform, and another dedicated to delivering key enhancements to a core product in the suite
- Directed the effort to break down a monolithic architecture into microservices, resulting in reduced complexity, faster delivery, fewer bugs, and more efficient CI/CD pipelines
- Shaped redesign of a legacy feature into a standalone SaaS application, unlocking new monetization opportunities
- Influenced execution aligning engineering delivery with roadmap goals, customer impact, and product strategy
- Evaluated and shaped build versus buy decisions with the CTO to balance delivery scope, maintainability, and cost
- Increased product reliability by implementing and standardizing monitoring, alerting, and incident response systems, leading to an 80% incident reduction in 8 months
- Reduced tech debt and legacy bugs through targeted initiatives, resulting in a 75% drop in issues
- Created engineering-wide systems for delivery and support enablement, including documentation standards and a knowledge transfer process adopted org-wide after the QA team was sunset
- Operated as a technical advisor during design and planning conversations by creating, documenting, and upholding engineering standards and best practices
- Grew the team from 1 to 10 engineers, leading all hiring efforts and implementing a rubric-based process to reduce bias and improve consistency across the engineering organization
- Developed an engineering specific career ladder with leadership to align expectations and support growth across individual contributors and people leaders
- Mentored and coached engineers through regular 1:1 conversations, actionable feedback, career development planning, and formal performance reviews, resulting in 3 full time engineers advancing to the next level
- Fostered a high-trust, inclusive team culture with 83% retention over 3 years (only departure was a career pivot)
- Collaborated across Product, Design, and Customer Success using async-first workflows to establish and improve continuous alignment across time zones

Fitness Tech Company – Remote

October 2021 – March 2022

Senior Engineering Manager

- Continued leadership of the engineering team following the launch of the livestreaming platform, supporting platform growth, production stability, and team scaling
- Managed the backend and integration team responsible for maintaining and evolving the livestreaming product
- Initiated exploration of a backend-for-frontend (BFF) architecture and federated GraphQL, contributing foundational endpoints in collaboration with backend leadership
- Facilitated a cross-team effort to consolidate and modernize backend services across the organization
- Formalized service ownership, testing, and observability standards to ensure post-launch stability
- Fostered a high-trust, inclusive culture through 1:1s, feedback, and rituals within a fully remote team

Consulting Firm – Greater Los Angeles Area

September 2016 – October 2021

Senior Engineering Manager (October 2019 – October 2021)

- Architected and built backend systems, frontend features, and ML pipelines to support data governance and enable client-facing analytics across multiple domains
- Oversaw engineering teams ranging from 2 to 14 across in-person and remote projects, cultivating high-trust

environments through structured 1:1s, continuous feedback, and inclusive team rituals

- Directed backend architecture and team growth for a greenfield livestreaming platform at Beachbody, scaling the team from 2 to 14 engineers from discovery through launch
- Collaborated with client executives to define business objectives and deliver strategic, high-impact technical solutions
- Owned delivery execution, including timelines, budgets, risk mitigation, and stakeholder alignment
- Championed internal culture efforts around transparency, inclusion, and equity through employee-led programming

Technical Lead (September 2017 – October 2019)

- Led technical delivery and architecture for client-facing systems, collaborating across time zones to align engineering execution with evolving product goals
- Mentored junior engineers through code reviews, pair programming, and design support
- Designed and implemented data pipelines using cloud services and machine learning tools to improve data accessibility and enable analytics for client stakeholders

Senior Software Engineer (September 2016 – October 2017)

- Developed full-stack web solutions using modern frameworks and cloud services to drive measurable client value
- Mentored interns and junior engineers, fostering a collaborative, growth-focused team culture
- Accelerated project delivery timelines, directly contributing to improved client satisfaction and account retention

eCommerce Company – Greater Philadelphia Area

June 2013 – August 2016

Software Developer

- Built systems supporting data access across mobile, web, and distribution center applications, ensuring performant and accurate product retrieval
- Acted as technical lead and backend architect for a team of contractors building API endpoints and services for a high-scale ecommerce platform
- Aligned frontend and business stakeholders around reliable, scalable backend architecture

Technical Skills

Technologies: JavaScript, TypeScript, Python, Node.js, React, SQL, NoSQL

Architecture and Delivery: Microservices architecture, Event-driven systems, CI/CD automation, Agile delivery, Roadmap planning, DORA metrics, Platform reliability, Performance optimization

Leadership and Team Systems: Cross-functional team leadership, Hiring and onboarding, Performance management, Team culture building, Remote team operations

Testing and Quality: Unit testing (Jest, Mocha, Pytest), E2E testing (Cypress), Quality and release standards

Cloud and DevOps Tools: AWS, GCP, Docker, Terraform, GitHub, Codefresh, CircleCI, Jenkins, Datadog, Splunk

Advisory & Mission-Driven Work

Educational Tech Space

Founding Engineering Lead

- Collaborated closely with the CEO and Head of Product to shape the vision, architecture, and roadmap for a platform that helps students access personalized college advising and funding support
- Defined early technical direction and delivery approach to support long-term maintainability and product scale
- Advised on team structure, hiring needs, and product planning in the early validation and prototyping phase
- Established initial engineering practices and helped build a foundation for a high-trust, mission-driven team

Education

Villanova University

B.S. in Computer Science
